

PRESS RELEASE

October 2019

## **Japanparts Group expands its range of suspension products**

### ***Pneumatic and electronically controlled suspensions now in the range***

Japanparts Group presents at Equip Auto 2019 (Hall 1 Stand J 109) a new range consisting of pneumatic and electronically controlled suspensions for all the circulating cars equipped with this technology. In details, the offer consists of air springs, shock absorbers with air springs and electronically controlled suspensions with air springs, for a total of 100 codes.

31 references of shock absorbers for power liftgates, to cover European cars, have also been introduced in the range.

Each component of the pneumatic and electronically controlled suspension range proposed by Japanparts Group is designed following careful reverse engineering operations on original samples and assembled in compliance with the manufacturer's strict specifications. The metal alloys, the plastic materials and the vulcanized rubbers always comply with the design of the original component, with special attention to the improvement of the critical points already shown by the original equipment parts in the years of circulation. Every single piece undergoes rigorous tests in the pre-assembly phase, during assembly and after the completion of assembly to guarantee perfect interchangeability with the OE, both in terms of installation, performance and operational life.

Like any other product offered by Japanparts Group, the pneumatic and electronically controlled suspensions ensure high reliability, which is the result of the careful selection of suppliers, one of the company's pillars. They also benefit from a timely customer service, also thanks to the recent expansion of the Verona's warehouse, able to manage over 15,000 withdrawal lines daily. The coverage offered by the new range of pneumatic and electronically controlled suspensions for European cars is also enviable, showing the strong commitment of the company to increasingly be a global player for its customers.

To support the launch of the new range of pneumatic and electronically controlled suspensions, Japanparts Group has created three catalogues

dedicated to the Japanparts, Ashika and Japko brands, which can be downloaded at the following link: <http://www.japanpartsgroup.com/splash/cataloghi.html>
